

Project Proposal – Web Engineering

Project Title: MR.CRYPTO

Title Here

Group Members:

Member 1 – Roll No: 23L-3022

Member 2 – Roll No: 23L-3023

Introduction:

Mr. Crypto is a comprehensive web application designed to simplify cryptocurrency tracking, trading, and future price analysis. The platform addresses the complexity of managing digital assets by providing a centralized interface where users can monitor their profiles, analyze market trends for currencies like Ethereum (ETH) and Bitcoin (BTC), and simulate trading transactions. The application is tailored for crypto-enthusiasts and beginner investors who require a streamlined, user-friendly environment to understand market fluctuations.

Objectives:

- To develop a secure authentication system allowing users to register and manage their personalized profiles.
- To implement a predictive analysis module that forecasts Ethereum (ETH) prices based on user-selected dates.
- To provide a functional trading simulation interface that calculates total amounts based on real-time quantity inputs for various currencies.
- To ensure a cohesive user experience through a responsive CSS-driven design that works across multiple devices.

System Functionalities/Modules:

-Authentication & User Management: Includes a multi-functional landing page for **Login** and **Sign Up** , along with a **My Profile** section where users can update credentials like usernames and emails.

-Price Prediction Engine: A specialized module for **Predicting Ethereum Prices** , allowing users to input specific dates to view predicted Open, High, Low, and Current prices.

-Trading Interface: A dedicated **Trade With Us** module where users select a currency (BTC/ETH), enter quantities, and provide credit card details for simulated transactions.

-Market Statistics & Visualization: A dashboard feature categorized under **Stats** within the profile to monitor performance and asset status.
